

FAIZ HASSAN

New Delhi, India | faiz.hassan.work@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Final-year B.Tech CSE (AI) student with a foundation in Data Structures, Algorithms, OOP, and software development. Hands-on experience building Python-based software systems and computer vision applications through projects involving rule-based systems, object detection, testing, and deployment.

EDUCATION

Maharaja Agrasen Institute of Technology, New Delhi	2024 – 2027
<i>B.Tech in Computer Science and Engineering (AI)</i>	<i>CGPA: 9.23</i>
Jamia Millia Islamia, New Delhi	2021 – 2024
<i>Diploma in Computer Engineering</i>	<i>Percentage: 80.4%</i>

TECHNICAL SKILLS

Languages: C++, Python, SQL

Core CS: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks

AI & Computer Vision: YOLO, Ultralytics, OpenCV, Neural Networks

Tools & Development: Git, GitHub, Linux, VS Code, Streamlit, Pytest

PROJECTS

Smart Medic | Rule-Based Emergency Triage & Queue Prioritization | Python, Streamlit, Pytest [Live Demo](#)

- Built a rule-based emergency triage system that converts patient vitals and clinical observations into severity scores, RED/YELLOW/GREEN triage levels, and dynamic queue priorities with red-flag overrides.
- Implemented deterministic priority-queue management with queue aging, patient reassessment, and simulated treatment flow to dynamically update patient ordering as waiting time and clinical conditions change.
- Developed a Streamlit dashboard for patient registration, live queue monitoring, reassessment, treatment tracking, outcomes, and patient history, supported by a Pytest regression suite.

Marine Debris Detector | Python, YOLO, Ultralytics, OpenCV, Streamlit, Hugging Face [Live Demo](#)

- Developed a YOLO-based object detection system to identify 15 classes of marine debris from underwater images.
- Evaluated the model on 1,001 validation images, achieving 84.2% precision, 77.2% recall, and 82.9% mAP@50.
- Deployed an interactive Streamlit application with the trained model hosted on Hugging Face for image-based marine debris detection.

TRAINING & EXPERIENCE

Samsung Innovation Campus Program (Hybrid) **Dec 2025 – Feb 2026**

Coding and Programming Track

- Developed Python programming and problem-solving skills through structured coursework covering programming fundamentals, functions, data structures, sorting algorithms, and algorithmic problem-solving.
- Applied data processing, descriptive statistics, and data analysis & visualization concepts through coursework and a mini project.

IBM SkillsBuild x CSRBOX — Project-Based Learning Trainee, AI Agent Architect **Jul 2025 – Aug 2025**

- Completed a 4-week project-based learning program focused on Agentic AI, NLP, and ML concepts.
- Worked on a marine-debris detection project as part of the program, gaining practical exposure to model development and AI problem-solving.

LEADERSHIP & ACHIEVEMENTS

- Photography Head & Event Manager, AIvolutions (AI Society, MAIT): Led visual content and event logistics for technical events.
- Letter of Recommendation: Received from the HOD, CSE-AI, MAIT for leadership in departmental society initiatives.
