Professional Summary

Final-year CSE (AI) student at MAIT (9.23 CGPA) with a strong academic background and working knowledge of DSA, OOP, and software fundamentals. Explored AI/ML through projects and training and interested in building efficient real-world software systems.

Education

Maharaja Agrasen Institute of Technology (MAIT)	New Delhi
B.Tech. in Computer Science Engineering (AI), 9.23 CGPA	2024 – 2027
Jamia Millia Islamia	New Delhi
Diploma in Computer Engineering, 80.4%	2021 – 2024

Certifications

Samsung	Hybrid
Samsung Innovation Campus Program	Dec 2025 – Feb 2026
- Applied Object-Oriented Programming (OOP) paradigms and advanced Data Structures to resolve complex algorithmic bottlenecks. - Optimized execution runtime and computational complexity across various software design challenges.	
CSRBox x IBM SkillsBuild	Virtual
AI Agent Development Training	July 2025 – Aug 2025
- Built basic RAG-based agent workflows for multi-step task automation using prompt engineering. - Engineered robust prompt structures and orchestrated backend logic to build structured, highly responsive AI agent pipelines.	
1Stop AI	Virtual
AI & Machine Learning Certifications	Aug 2024 – Sep 2024
Implemented ML algorithms using Scikit-learn for predictive tasks and performed data preprocessing with real-world datasets.	

Technical Skills

Programming: C++, Python, SQL
Core CS: Data Structures & Algorithms (DSA), OOP, Operating Systems, DBMS, Computer Networks
AI & ML: Deep Learning, Neural Networks, RAG, TensorFlow, PyTorch
Tools: Git, VS Code, Linux, Jupyter, Streamlit
Soft Skills: Problem Solving, Analytical Thinking, Teamwork, Adaptability

Projects

Smart Medic: Emergency Queue Manager.....
- Engineered a rule-based triage engine in Python to prioritize ER patients based on clinical urgency, optimizing sorting flows and reducing simulated processing latency. - Implemented a max-heap priority queue for dynamic prioritization and designed an aging algorithm to eliminate queue starvation under limited hospital resource constraints.
Underwater Debris Detection App.....
- Architected a custom CNN model achieving 92% classification accuracy using TensorFlow and OpenCV to categorize marine debris. - Developed an end-to-end processing pipeline for real-time inference on custom underwater datasets.

Leadership & Achievements

- Photography Head, Aivolution (AI Society, MAIT): Managed visual content and supported event logistics for technical events, ensuring smooth execution and coordination.
- Received a Letter of Recommendation (LOR) from HOD, CSE-AI, MAIT, recognized for leadership in departmental society activities.
